### **Drs. Fine, Hoffman and Packer, LLC To Offer Surgical Treatment For Presbyopia and Cataracts**

The ReZoom Multifocal Lens Can Allow Many people to Live Without Depending on Glasses!

Eugene, Oregon---The Nearsighted population in (your area) is now able to undergo a surgical treatment that might mean patients can enjoy a better quality of life without depending on glasses. Drs. Fine, Hoffman and Packer are now offering the ReZoom Multifocal lens to provide patients vision correction; allowing many people to enjoy a better quality of life with independence from glasses.

“Fellow eye surgeons around the country are reporting excellent success in treating nearsighted patients with the ReZoom Multifocal. They are preserving or restoring vision and allowing many people to enjoy life without depending on glasses,” said Dr. I. Howard Fine. There are a number of people who would be interested in the results that the ReZoom lens can provide; including people with presbyopia or those that have cataracts. “I treat many cataract and presbyopic patients and they constantly are asking me if there is a safe and effective way to let them live without the increasing dependence on glasses. Now I can present them with an alternative that may let them be free of glasses and or contacts,” said Dr. Mark Packer.

Drs. Fine, Hoffman and Packer, LLC is a complete eye care and vision correction practice focused on restoring a full range of vision independent from glasses in daily situations. Studies have found that the ReZoom lens provides excellent vision which allows people to enjoy most aspects of daily life without dependence on glasses.

Studies have also found that the ReZoom lens is a viable treatment for presbyopic cataract patients that provide good vision. Presbyopic cataract patients are highly motivated to be less dependent on glasses and have never enjoyed precise distance vision. Studies have also found that most bilateral ReZoom patients function independently from glasses after surgery in most daily situations.

Drs. I. Howard Fine, Richard Hoffman and Mark Packer are one of a select group of practices that are continually involved in the research and clinical investigation of the latest intraocular lens designs and cataract removal technologies. Due to our relationship with the ophthalmic industry, we are able to offer some of the most advanced and safest cataract surgery technology and the most advantageous intraocular lens designs to our patients many years before they become available to the general public. Drs. Fine, Hoffman and Packer in Eugene, Oregon were among the first physicians in the Northwest to treat patients with the ReZoom intraocular lens implant.

Drs. Fine, Hoffman and Packer can be contacted at 541 687-2110 for an evaluation.
